A. Project Title

Ordering System for Printing Services

B. Related Research Studies/Systems

- **Related Studies/Article**
  - Online Printing Companies in Nigeria: Exploring the Role of Digital Marketing Communications for Sustainable Growth
    - This academic research explores how digital marketing strategies are essential for the survival and growth of printing businesses in Nigeria. This research discusses the transition from traditional walk in services to digital storefronts. It also emphasizes that consistent communication and online visibility are the primary key to ensure business longevity in a competitive market.
  - Web Based Ordering and Inventory Information System for Online Printing Services with TAM Method
    - This research focuses on the expansion of a specialized management system that computerizes both the customer ordering process and tracking the internal stock for print shops. This article also utilizes the Technology Acceptance Model (TAM) to measure how easily users adopt the system.
  - Best Web to Print Solution for Scalable Print Shops
    - This research serves as a guide for printshop owners looking to implement "Web-to-Print" (W2P) software to help them expand

their business. It interprets how these platforms allow customers to design and order products online while automating the prepress workflow. This process reduces the needs for manual file checks and it allows the show to handle higher volume of orders.

- E-Commerce Platform for Custom Printing
  - This document focuses on building an e-commerce site for printing. It outlines the necessary chapters such as the problem statement, literature review, and methodology required to document the development of a platform where users can upload design and complete custom print transactions.
- Providing customized goods through an e-commerce system for printshops
  - This paper examines the technical architecture required to support mass customization in the printing industry. It also bridges the gap between a customer's unique design choices on a website and the actual production hardware in the shop, ensuring the personalized items can be produced at a lower cost.

- **Related Systems**
  - Wp2print e-Commerce System
    - An e-commerce solution designed for printing businesses that enables customer to place their orders online, upload desired

files, customize their design, and track production. With payment processing and order management similar to our system.

- GleePrinting
  - An online printing service similar to our proposed system, allows customer to order printed product, upload files, and also customize their designs through the web-based system.
- MetroPrint.ph
  - A web-based printing service that offers a complete online order system where customers can select product, view pricing, and request printing service.
- Entwistle
  - A professional printing service that offers various print solutions such as marketing material and business prints. A system focused on delivering high-quality printed materials for different business needs.
- Papercut
  - A print management system, allows organizations to control, track, and manage printing activities. Includes features such as user authentication, cost tracking, and secured printing, which are useful concepts to our system.
